

**Identification Systems
for the Automotive Industry**

Our qualified contribution to the state-of-the-art automotive passive restraint and safety systems

The continuous advancement of the automotive industry demands innovative, flexible product identification systems. We offers a multitude of solutions for the production of adhesive labels and precision die-cut parts. Our know-how is the key to providing our customers with made-to-order solutions.

The world of labeling for Automobile

- 7 Auxiliary heating
- 8 Sunroof control
- 9 Spare tire kit box
- 10 Transmission & axles
- 11 Containers
- 12 Wire harness
- 13 Protection
- 14 Tire pressure
- 15 Spare wheel

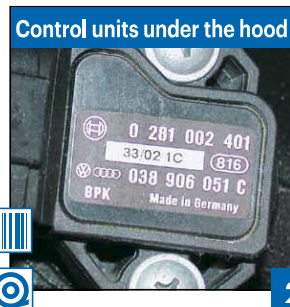

Laminated labels

The data label is provided with a transparent protective film. This extra layer of protection offers lasting resistance against mechanical abrasion, acids or other aggressive chemicals.

Barcode labels

The material construction can be imprinted on-demand using thermal transfer ribbons. The imprinted variable data possesses a high resistance against a multitude of chemicals and fluids.

Type-specific nameplates

Each label is designed to withstand solvents, oils, water, extreme temperatures and mechanical abrasion. The selected adhesives are suited for rough, textured and low-energy surfaces.

All from one source

In the case of precision stamped pieces, the pressure sensors are applied by a fully automatic dispenser. Labels with the most complicated shapes can be processed with great precision.

Protective labels

During the manufacturing process, sensitive components can be safeguarded against dirt particles or minor scratches by using labels as a protective barrier. When the component is ready to be installed, the label can be removed without leaving any residue.

Multi-part labels for identification

These labels uniquely identify products while recording production data for the required documentation. As a result, seamless product traceability is assured.

Product Labeling

Our labels can almost do it all allowing you to receive components for individual product labeling with a maximum amount of flexibility. The use of different production technologies ensures you high-quality products. Challenge us to find innovative solutions together.

Identification Systems

Turn your production into a data all-rounder. Whether it be in-house printed labels, the universal recording of bar-codes or data transfer to your computer system - no problem. We offer complete ID system solutions, including hardware and software so that you can take care of the essential: your business.

Labeling & Automation

Systematic labeling. Our innovative labeling systems are available in standard versions or as special customized solutions. Put us to the task and we will deliver the perfect system. Our comprehensive service offering ensures smooth operation. Challenge us.
